QMP
POS Software

Retail

The QUORiON retail management software is the immediate response to the expanding number of small to medium sized shops and chains searching for a cost-effective, fully integrated POS solution. We designed our retail software with you in mind to deliver a simple, flexible, and efficient system.

Some software suites offer lots of features, but are very difficult to learn. Others are simple to operate, but lack the functions you require. With the QMP retail software, you get both an amazingly rich feature set and superior usability. For instance, it delivers extensive tailoring tools, so that you can customize the interface to suit you. Quickly program your POS system on your PC and then send the data over via your PC network to all ECRs. Likewise, retrieve data from ECRs via LAN or WAN. Plus, it supplies a complete management system with highlights such as 55.000 PLUs, barcode printing, and scanning. You can also program up to 50 types of multi-buy action tables and thereby offer special discounts to repeat customers. Functions such as credit card processing, reporting, and customer management will give you the edge you need. Achieve new levels of checkout proficiency, improve customer service, and enhance client satisfaction.

Low cost of ownership and increased profitability are fundamental to the QMP retail software. Combined with QUORiON POS systems you receive a fully integrated retail management solution that disposes of high admin/maintenance costs and complex servers. After all, you want to manage your store and not your software.

QUORiON
Data Systems GmbH

CONTROLLING

ECR Stock Control	Stores the inventory quantity, amount, minimum and cost price for each article.
E-Journal	Supplies electronic storage of all transactions.
Quori Log Support	Stores electronic journals on an external SD card.
Configurable Reports	Allows you to configure data retrieval to include information, which is most important to your own particular business, thereby maximizing your analytical results.
Clerk Cash Declaration	All clerks need to count their money in drawer before they are allowed to run the Z-report.
Entry of Employee Work Times	All clerks need to logon if they start and logoff if they stop working.
Monitored Pay-in And Pay-Outs	All PO/RA are recorded in the reports.

EFFICIENCY

Customer Accounts	Display / Print-out of customer name and address, login with magnetic card, code number or scan code, save loyalty information.
Alphabetical PLU Search	Search PLU's in registration mode by name instead of number.
Software Driven Updates to All Registers	Uses QFLASH to update cash register features on chip.

FLEXIBILITY

Q-Prog	PC utility for programming your cash register & POS system. Download Retail Demo configuration for Q-Prog to test features.
Complete Programmable Parameters	Easy programming of system parameters such as taxes, menus, reports and much more with Q-Prog.
Floating PLUs	Any price changes, or other modifications of the PLU programming will automatically be sent to all registers in the network.
Receipt Design	Allows you to customize your receipt.
Scanning & Bar Codes	Read the PLU barcode from the items and get the corresponding price and description from the ECR's data base.
Certified Scales	A connected scale sends the weight of an article either automatically or on request to the cash register + price.
Modem or WAN for Remote Access Support	Connects your office to the POS system in your stores via the Internet.
Networking	The QUORiON inter cash register network makes communication between POS systems possible by connecting them much like a PC network.

REVENUE MANAGEMENT

EFT	Supports a wide range of traditional credit card terminals and new web based payment systems.
Loyalty Systems	Stores customer data and tracks how often the client has purchased from you.
Condiment Tables & Modifiers	Makes cross- and up-selling possible.
Mix & Match	There are more than 50 different types of special actions to grant discounts to the customer.
Price Levels	Switch to another price level, either manually or automatically by clerk, time (happy hour), special action, etc.
Time Based	Charge different prices depending on the time of day.

Restaurant

The QMP restaurant software specifically delivers POS functions to the small to medium size bar, club, or restaurant owner. Whether you run a take-out or a table based restaurant, your customers nonetheless insist on a convenient and consistent service. This is where QUORiON helps you.

Restaurant POS Software

The graphical touch screen opens new possibilities to cleverly manage your restaurant. Take advantage of a user interface, which offers table layouts, menu structures, and button customization. Create fully interactive table layouts to fit the interior of your restaurant. Color codes show the status of a table and thereby convey information about it – see which tables are open or closed as well as those that the service staff has neglected. Skillfully manage all tables to increase operating efficiencies and maximize customer turn-over. Separate / combine tables, reopen them, or transfer balances fast and easy. You can also take advantage of the software's table floating capability, which automatically transfers all active sales data per customer to any POS system in your network. Share information and devices over a network to remain as flexible as your business requires.

Additionally, the QMP POS software provides an electronic tap control for your beverage systems. Theft and wasteful operation on all dispensed beverages present a danger to your business's ongoing profitability. The QMP software stops this activity in its tracks, so that you remain in control of your business.

Bakery

QUORiON has designed the QMP POS software's bakery functions around your exact needs through years of input from partners and shop owners alike. Ultimately, you receive features that save you time plus money through low cost of ownership, work flow improvements, and flexibility.

The QMP POS software is ideal for small businesses that do not wish to invest in expensive server systems, but nonetheless wish to stream line their operational processes. The POS software helps you proactively manage orders, receipts as well as baking lists and accounts. Moreover, it stores ample info services for quick access to PLUs, prices, and descriptors. The built-in floating functionality makes order registration a breeze even during peak hours. With the assistance of a touch screen, you gain further work flow enhancements via the menu driven order entry. Best of all, these features come standard with any QMP cash register or POS system. You therefore gain a professional bakery management suite at the fraction of the cost you would ordinarily pay for competing products in the industry.

Despite the low cost of ownership QUORiON bakery systems remain scalable even on the day you decide to expand your business. It easily supports remote dial up to retrieve data from several stores. But it does not end there! The software supports a wide variety of peripherals devices such as ordering terminals or beverage dispensers, if you wish to supplement your service offer as well.

FEATURES:

- **Clerk Cash Declaration** - All clerks need to count their money in drawer before they are allowed to call up the Z-report.

- **Entry of Employee Work Times** - All clerks need to logon, when they start and logoff, when they stop working.

- **Floating Clerk** - The Floating Clerks (Clerk Interrupt System) is used to temporarily store a transaction for a clerk. In this way more than one clerk can work simultaneously on one cash register.

- **Order Processing** - Special orders can be stored to be prepared at a specific date and time, either for pickup or delivery service. Furthermore, the cash register prepares daily branch orders and sends them out to the bakery controlling software in a common data format.

- **Time Based** - Charge different prices depending on the time of day.

QUORiON

Dry Cleaning

In addition to delivering outstanding retail and restaurant functionalities, the QMP POS software even makes dry cleaning service features available to you. It is ideally suited for small businesses with a walk-in customer base and personal interaction.

For instance, the software addresses the need for greater flexibility in receipt design and management. Ticket print outs are fast and easy in combination with QUORiON POS systems. Design your own tickets styles, include your own content, insert bar code options, or personalize receipts with your own marketing message or company logo. It's all included. Along with the receipts, the QMP software prints out separate hydrofix-paper tickets for each one of your clients to easily tag their garments. This greatly speeds up retrieval and client processing, increasing your customer's satisfaction and loyalty.

Yet, the great flexibility does not end with the receipt alone. The QMP POS software confers greater business utility as well, because it lets you concentrate on your customers rather than on tedious paper-work, lengthy retrieval of clothing items or tabulating totals at the end of the day. Call up balance reports, automate balancing, and directly access PLU items (such as articles) with QUORiON's fast touch screen menus.

FEATURES:

- **Automatic Balancing** - Orders will automatically set on balance with a specific number. When the key is pressed at the end of the transaction the register will automatically store the transaction on the first free balance number. No need to search manually for the next free number, saves you time.

- **Open Balance Reports** - Prints out all orders which are not yet paid. Gives a report containing all open balances, so that you can check debits.

- **Special Printing Format on Hydrofix-Paper** - Print on special paper with normal EPSON printer. Hydrofix paper is 44mm, but you can use the normal 76mm EPSON as well. Removes need for special printer.

- **Direct PLU Keys** - PLU's are programmed directly on keys. get a PLU by one key. Saves time compared to selecting from a list.

Hair Salons

From small boutiques to networked, multi-regional chain salons, our POS software's hair salon capabilities gives you an easy-to-learn, easy-to-use touch screen driven interface to streamline operations and maximize profits.

You can deploy the QUORiON hair salon solution to manage virtually all types of salons – either in form of a stand-alone system or WAN linked chain of stores. The QMP POS software supports both scenarios. Moreover, the tremendous user experience coupled with the embedded QUORiON hardware, allows even those with limited PC experience to start serving your clients almost immediately. This saves you critical time and training costs, thereby addressing the high employee turn-over rate often found in the industry. With the QMP software's powerful reporting tools you can also quickly capture and analyze critical business data. Irrespective of size, turnover, or the way you run your hair salon, the QUORiON POS software ultimately lets you stay in control of your business.

FEATURES:

- **Independent Sign-On of Stylists** - Cashier und user sign on independently. User do not require access to cash register in order to calculate revenue. This makes separate commission calculations possible.

- **Different Stylists on One Receipt** - You can switch users during a transaction. This allows for a separation of duties such as washing, styling, and drying. This also makes separate commission calculations possible.

- **Detailed Reports by Stylists** - You can call up reports on different stylists and users in order to evaluate the performance of each.

- **Staff Discounts** - Makes discounts available to staff and improves motivation.

- **Vouchers** - Vouchers, coupon can be maintained by the CR. The CR will save all coupons and check the validity. Automatic coupon system increases security and protects from abuse.

- **Commission Rate** - Based on independent sign-on. Stylists and users receive different commission rates. Allows you to allocate more to your best staff or by experience.

Stock Control

The Store Mangement Add-On for Q-Prog is the successor to the popular OptiCash software. It provides stock control functionality for QUORiON QMP cash registers and POS systems. Given the price sensitive nature of today's POS market, the Add-On comes included with Q-Prog at no additional charge. It delivers valuable tools you need to cleverly manage your items for sale, print shelf labels, and create order reports. With just a click of a button you can update your entire PLU database across the network. Furthermore, you gain additional insight into cost price, inventory minimum, and inventory amounts/movements.

FEATURES:

- Keeps track of stock quantity for each PLU.
- Provides additional information about cost price, inventory minimum, and inventory amount.
- Easy stock taking (add and subtract stock).
- Create and print inventory and order reports.
- Update data base automatically by click of one button.
- Shelf label printing.

QUORiON
Data Systems GmbH

Loyalty systems

The QMP software supports customer accounts with individual programming of name/address, price level and discount calculation. The accounts are accessed by customer number, entered either by magnetic card, scanner or keyboard entry. Corresponding to that number the POS will automatically open a customer specific balance. All sales totals are individually reported by customer, so the system can also be used for loyalty.

FEATURES:

- **Customer accounts** - Program name/address for customers and make a pre-selection of specific price levels or discounts.

- **Magnetic card reader** - Read account numbers directly from magnetic cards or scan codes.

- **Order details on invoice** - Store date, time, amount and items for every single order and print it separately on the final invoice.

- **Delivery system** - Create delivery accounts with name/address and re-call previous orders when opened again.

- **Tabs for bars -** Enter customer names when the tab is opened the first time. When the tab is paid, the name is automatically removed.

- **Loyalty report** - Check the summarized grand total and order details for each customer.

Data Systems GmbH

Reporting

The QMP POS software's reporting functions offer a sheer limitless potential in analyzing your business's data. As you come to expect from the QMP POS software, everything is completely customizable. With a multitude of parameters to customize reports it makes it easy for you to retrieve the information you desire. Moreover, by delivering the capacity to consolidate your data, it adds a competitive value to your operations. Naturally, you can also export data into spread sheets for further analysis. Based on the information you attained from these reports, you can easily adjust store performance by making timely changes to merchandise and promotions or aligning operations around vital revenue targets. Maximize revenue with periodic reports on performance by departments or products and put yourself in the position to quickly react to market trends.

Besides the standard X- and Z- Reports commonly found in the cash register industry, the QMP POS software offers a variety of report types such as detailed invoice, sales, tax, and user defined reports. You can customize all of these to suit your preferences. The X- and Z- Reports a simply a sub-class of all reports, as these indicate whether the data will be displayed (X) or deleted from record (Z) after they are shown (either via print-outs, PC screen or as a report on the cash register display).

FEATURES:

INVOICE REPORTS

- Breaks down sales for a selected period by department or any user defined parameter.
- Lists of all payouts.
- Displays invoices printed for the selected time frame including net, tax, and total amount, how the customer paid, and the employee who managed the transaction.

SALES REPORTS

- A breakdown of sales for a defined period by net, tax, and gross sales.
- Shows the amount of payouts for each selected period.
- Shows the number of invoices printed for each selected period.
- Lists total sales by department for the dates requested including a breakdown of customer tendering.
- The program automatically summarizes sales by user defined parameter such as product and period.
- Delivers vital information to prepare financial reports.

SALES TAX REPORTS

- Daily Invoices - displays all invoices for a particular time period.
- Cash Payout Report - lists all cash payouts for a particular time period.
